IMPORTANT: This submission contains the entire insert of clone
ppJ754NIS. ppJ754NIS comes from the RPOL-3 PAC library constructed
at the Roswell Park Cancer Institute by the Pieter de Jong group.
This clone has been finished according to strict quality criteria
and attempts have been made to resolve all base calling problems
Buettner, J., Bumeister, R., Card, P., deSailboat, F., Dunn, J., English, C., Ethridge, S., Garner, H.R., Gee, V., Gordon, M., Gotway, G., Grant, O., Hahner, L., Joslin, J., Lewis, E., Loo, H., Loo, K.N., Major, T., McFarland, J., Newton, J., Osborne-Lawrence, S., Schageman, J., Schultz, R.A., Stimson, S., Syed, M. and Ward, T. HTGS Submission
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               such as compressions and repetitive elements. The expected prod/phrap calculated errors/10kb is 0.97. In addition, attempts have been made to assure over 99% of consensus base calls consist of either double-stranded coverage or 2 types of labeling chemistry on one strand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CHROMOSOMAL LOCUS: This PAC clone comes from the Chromosome 11p15.5 Wilms tumor type 2 (WT2) region between ESTS CTSD and IGF2(INSL2). This region spanning approximately 2 Mbp is mapped between D11S2701

It currently consists of 9 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Direct Submitssion.
Submitted (15-NOV-1999) Whitehead Institute/MIT Center for Submitted (15-NOV-1999) Whitehead Institute/MIT Center for Research, 320 Charles Street, Cambridge, MA 02141, USA on Jan 19, 2001 this sequence version replaced gi:7382100. All repeats were identified using RepeatMasker: Sint, A.F.A. & Green, P. (1996-1997) http://ftp.genome.washington.edu/RW/RepeatMasker.html
